**Abstract**

Release and recapture information is given for 2930 recaptured tagged Australian salmon from 14752 liberated in South Australian waters between 1952 and 1976. When data are available, recapture information includes locality, date, age and/or fish length (including similar release data), and whether the return was from an amateur or professional fisherman.

## Introduction

The biology of the Australian salmon (*Arripis trutta esper*) has been studied by the CSIRO Division of Fisheries Research since 1939. As part of this study, many fish have been tagged in South Australia during three major programmes (1952-1954, 1962-1964 and 1974-1976). However, not all of the resulting information has been published (see references). To make the data available for further analyses, and to provide an historic record, they are presented here in a common format, with all of the available information given for each data category.

## Data format

There are three sets of experiments: SA 001 to SA 015 (1952-1954, 3970 releases and 412 recaptures); SA 016 to SA 032 (1962-1964, 1465 releases and 159 recaptures); and SA 033 to SA 114 (1974-1976), 9317 releases and 2359 recaptures; experiment numbers SA 035 and SA 081 were not used). In the first set of experiments, internal plastic tags without protruding streamers were used; in the successive sets, streamers were attached (see Stanley 1983 for further details).

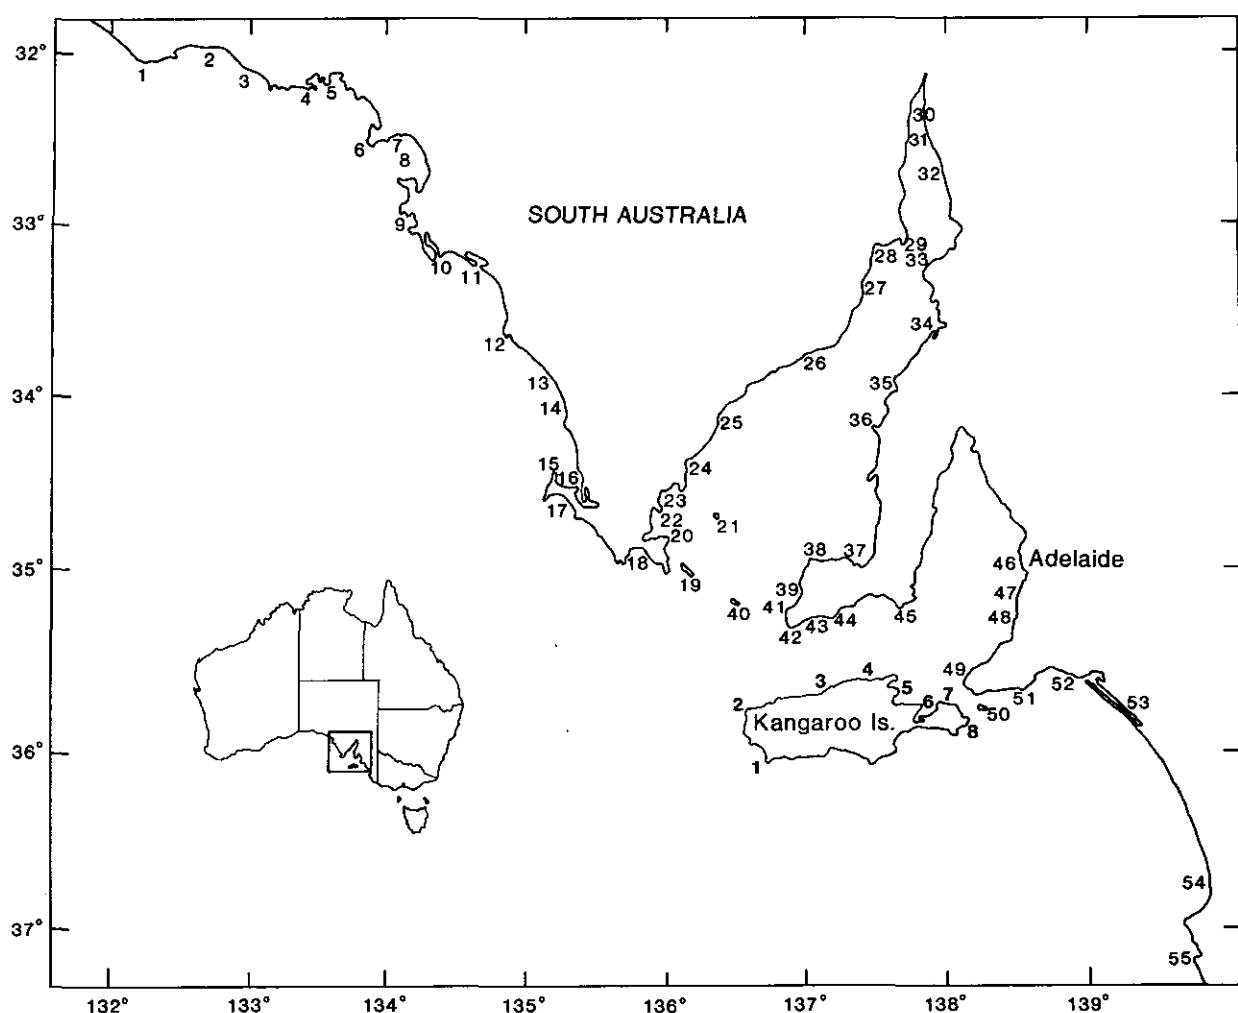

Fish length measurements (cm) are from the snout to the caudal fork. Length data at release are accurate, the measurements having been made by scientific staff. Of the length at recapture data, those coded as 'P' or 'PP' are also in general accurate, most having been made by scientific staff stationed at cannery centres. Lengths coded as 'A' were generally recorded by amateurs, and are less reliable.

The length or age composition of the salmon caught in a particular experiment was calculated in one of three ways:

- as numbers within model length groups, determined from the inspection of length-frequency graphs constructed from measurements taken from all or some of the tagged fish when released
- as estimated length ranges (asterisked), determined from separate subsamples of fish not tagged
- as age compositions, determined by reading scale samples, usually removed from every fifth fish tagged, and applying these results to length-frequency modes

For some experiments, no length or age information is available. Ages are recorded as the number of rings present on scale samples. Recapture ages are usually estimated from release ages, though in some cases ages were directly calculated from scale samples taken at recapture.

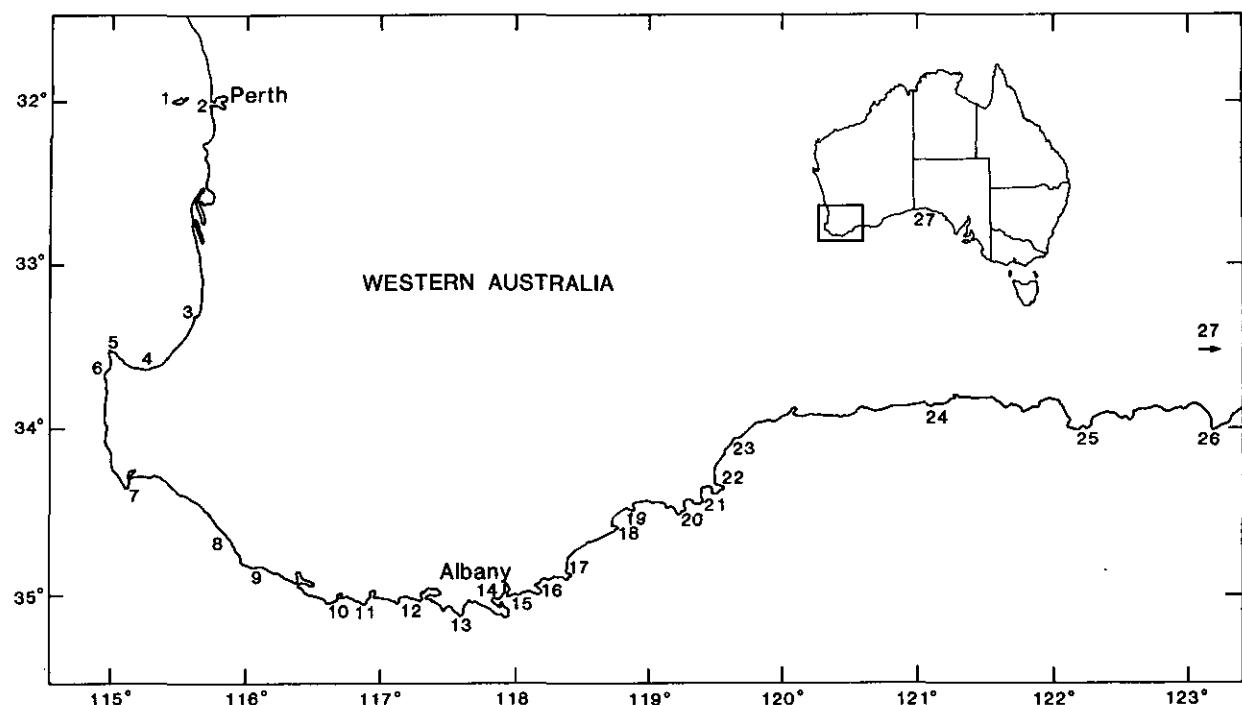

Annulus formation occurs mainly in October (Malcolm 1960), and thus for recaptures made from each October following release, ages are increased by one year.

EXPERIMENT NO. SA 065

Place of release : Venus Bay

Number of fish released : 109

Per cent recaptured : 24.8%

Date of release : 17 July 1975

Age composition : 1 (92); 2 (11); 3 (3); 4 (3)

EXPERIMENT NO. SA 070

Place of release : Sceale Bay      Date of release : 15 August 1975  
 Number of fish released : 150      Age Composition : 2 (97); 3 (43); 4 (10)  
 Per cent recaptured : 33.3%

**EXPERIMENT NO. SA 073**

Place of release : Waitpinga Beach      Date of release : 5 October 1975  
 Number of fish released : 7      Age Composition : 1 (3); 2 (3); 4 (1)  
 Per cent recaptured : 0%

**EXPERIMENT NO. SA 074**

Place of release : Port Elliot      Date of release : 8 November, 1975  
 Number of fish released : 49      Age Composition : 31 (32); 2 (17)  
 Per cent recaptured : 16.3%

## EXPERIMENT NO. SA 080

Place of release : Port Adelaide      Date of release : 19 November 1975  
 Number of fish released : 2      Age Composition : 1 (2)  
 Per cent recaptured : 0%

## EXPERIMENT NO. SA 082

Place of release : Troubridge Point      Date of release : 31 January 1976  
 Number of fish released : 15      Age Composition : 2 (1); 3 (14)  
 Per cent recaptured : 20.0%

## EXPERIMENT NO. SA 104

Place of release : 25 km S Meninninnie Date of release : 17 June 1976  
 Number of fish released : 508 Age Composition : 1 (507); 2 (1)  
 Per cent recaptured : 54.1%

## Capture Information

| Fish number | Recapture locality | Recapture date | Days free | Age in years |       | Length in cm | Returned by |   |

## EXPERIMENT NO. SA 113

Place of release : Venus Bay      Date of release : 28 June 1976  
 Number of fish released : 481      Age Composition : 0 (478); 1 (3)  
 Per cent recaptured : 13.1%

## Capture Information
