RESEARCH ORGANIZATION, AUSTRALIA 1961

## CORRIGENDUM

## OCEANOGRAPHIC STATION LIST—VOL. 41

Page 4: With reference to (c)  $CO_2$  Uptake—

The values for the added activities of the  $^{14}C$  stock solutions used in the measurements of  $CO_2$  uptake reported here have been redetermined by the liquid scintillation counting method described by Jitts and Scott (1961). These new values are considerably higher than those given. To use the improved standardization values the data for production given in this volume should be multiplied by the relevant factor given in the following table:

Cruise (No.)	$^{14}C$ (Stock No.)	Activity (counts/min $\div 10^6$ )		Correction Factor
		Old Value	New Value	
3-5	3	6.17	10.66	0.58
7-15	4	4.51	9.72	0.46
16-18	5	0.393	0.94	0.42
20	6	3.85	9.10	0.42

## OCEANOGRAPHICAL STATION LIST

OCEANIC INVESTIGATIONS IN EASTERN AUSTRALIAN WATERS,  
F.R.V. DERWENT HUNTER, 1959

Compiled by A. D. CROOKS

### I. INTRODUCTION

The results of observations made on 15 cruises of the Division's Fisheries Research Vessel *Derwent Hunter* during 1959 are reported. Cruises DH1/59, 2/59, 3/59, 6/59, and 8/59 were designed to study the East Australian Current; cruises DH5/59, 7/59, and 10/59 were concerned with primary production; DH11/59–15/59 were cruises to study the effect of certain oceanographical conditions on tuna distribution. (See Fig. 1.)

### II. METHODS AND UNITS

In all cases reported the time is in Eastern Australian Standard Time (Time Zone K). Wind force is reported according to Beaufort's scale. Sea observations have been coded following the instructions issued by the United States Navy Hydrographic Office (1955).

#### (a) *Hydrology*

For most stations more than one wire angle is recorded. In these cases, the first is the wire angle appropriate to the deep cast, 500–1500 m, and the second is that of the shallow cast, 0–250 m. Where a third wire angle is given, an extra cast has been necessary owing to failure of some part of the equipment such as a thermometer.

(i) *Temperature*.—Temperatures were taken with deep sea reversing thermometers and corrected for mercury expansion effects and index error. Depths were determined from differences in the readings of protected and unprotected thermometers.

(ii) *Salinity*.—In this volume salinity has been recorded in preference to chlorinity and it is expressed in parts per thousand. Chlorinity is first determined using a temperature-chlorinity meter (Hamon 1956), and is then converted to salinity by using Knudsen's tables (1948).

(iii) *Oxygen*.—Dissolved oxygen determinations were carried out according to Winkler's method as modified by Thompson and Robinson (1939). The values are reported as ml/l. Oxygen saturation values were calculated by using the nomograph of Richards and Corwin (1956).

(iv) *Sigma-t*.—Sigma-t was calculated using a nomograph constructed from information issued by the United States Navy Hydrographic Office (La Fond 1951).

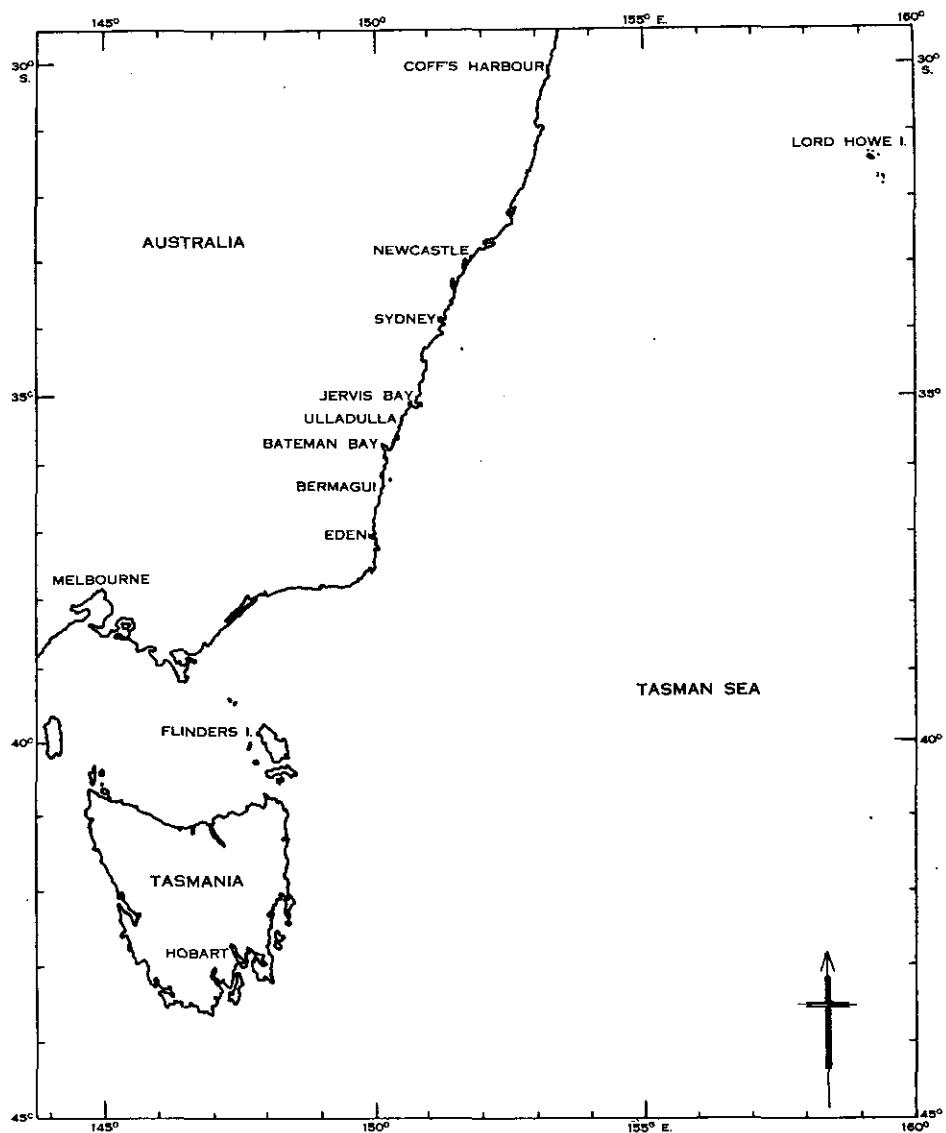

Fig. 1.—Map showing area in which F.R.V. *Derwent Hunter* worked during 1959.

(v) *Phosphate P.*—Inorganic phosphate determinations were made using Atkins's (1923) modification of Denigès's original method. Stannous chloride was used as the reductant. Distilled water standards were used and no salt error correction was applied. Other forms of phosphorus were converted to orthophosphate by Robinson's (1941) digestion method, prior to the determination of total phosphorus.

(b) *Pigments*

Water samples were taken with a plastic sampler and filtered at once through millipore filters. The filters were placed in envelopes and stored in metal vacuum desiccators over silica gel. The analyses were carried out within one month of collection using the method of Richards with Thompson (1952). The details and justification of the method used are given in Humphrey (1960). The asterisk \* indicates negative values.

(c) *Primary Production*

Measurements of photosynthetic CO<sub>2</sub> uptake by marine phytoplankton were made by the <sup>14</sup>C method described by Jitts (1957).

Incubation was done either *in situ* where the samples were resuspended in the ocean at the depths from which they were taken, or in a fluorescent light bath with a constant illumination of about 1100 ft candles. The period of incubation for the *in situ* samples was from sunrise to sunset (all day) or from sunrise to local noon (half day). The period of incubation in the light bath is given in hours.

Depth from which the sample was taken is given in metres below the surface.

Activity is in counts per minute corrected for background. All counts were taken to 10,000 counts, or 5 min, whichever occurred first, and are corrected for counter instability by reference to a count of a known <sup>14</sup>C standard sample (labelled "Perspex") either directly preceding or following the unknown sample. Counts were made with a windowless Geiger counter with an efficiency of about 40%.

"Light" is the activity of the sample in the clear tube after incubation and filtration. "Dark" is the activity of the sample from the duplicate dark tube. "Net" is the light activity less the dark activity. "Production" is the rate of uptake of CO<sub>2</sub> calculated by means of the formula:

$$\frac{\text{Net Activity}}{\text{Added Activity}} \times \frac{90}{1} \times \frac{12}{44} \times \frac{1000}{\text{Period of Incubation}}$$

The CO<sub>2</sub> content is assumed to be 90 mg/l. The added activities used during the cruises reported in this volume were as follows:

Cruise (No.)	<sup>14</sup> C (Stock No.)	Activity (counts/min)
2	5	$0.94 \times 10^6$
6-8	6	$9.10 \times 10^6$

These activities were determined by the liquid scintillation counting method described by Jitts and Scott (1961).

For *in situ* samples the production is given in mg C/m<sup>3</sup> per day. For samples incubated in a light bath the production is given in mg C/m<sup>3</sup> per hour.

The estimation of the rates of production per m<sup>2</sup> column of water at each station is made by use of the formula:

$$\frac{1}{1000} \left( \frac{25}{2}(a+b) + \frac{25}{2}(b+c) + \frac{50}{2}(c+d) \right),$$

where *a*, *b*, *c*, and *d* are the rates of production at 0, 25, 50, and 100 m respectively. To obtain the daily rate of production from light bath incubation measurements (mg C/hr/m<sup>3</sup>), the formula is multiplied by the factor 10, assuming as a rough approximation that the daily rate is 10 times the hourly rate.

### III. PERSONNEL

The sampling has been the responsibility of Messrs. R. Bradley, F. Davies, N. Dyson, W. Prothero, and J. Staniforth. The laboratory analyses of salt water samples have been carried out at the Cronulla laboratory by Messrs. G. Dal Pont, F. Davies, W. Prothero, and C. Walker. The pigment determinations were made by Mr. M. Wootton. Preparation of ampoules of <sup>14</sup>C and the counting of samples were carried out by Messrs. N. Dyson and B. D. Scott. Mrs. E. Wood, and Misses F. Luce and R. Weidenhofer have been responsible for processing and Mrs. D. Schmitzer for the preparation of typed sheets under the general direction of Mr. A. D. Crooks.

## OCEANOGRAPHICAL STATION LISTS

1. Hydrological and planktological observations by F.R.V. *Warreen* in south-eastern Australian waters, 1938-39
2. Hydrological and planktological observations by F.R.V. *Warreen* in south-eastern Australian waters, 1940-42
3. Hydrological and planktological observations by F.R.V. *Warreen* in south-western Australian waters, 1947-50
4. Onshore hydrological investigations in eastern Australia, 1942-50
5. Estuarine hydrological investigations in eastern Australia, 1940-50. Queensland: Nerang and Coomera Rivers, Moreton Bay and Brisbane River, Logan River, Dunwich Oyster Lease; New South Wales: Richmond River, Clarence River, Macleay River, Hastings River, Manning River, Port Stephens, Tilligerry Creek, Hawkesbury River
6. Estuarine hydrological investigations in eastern Australia, 1940-50. New South Wales: Middle Harbour and Port Jackson, Georges River-Rotany Bay
7. Estuarine hydrological investigations in eastern Australia, 1940-50. New South Wales: Port Hacking, Lake Illawarra, Shoalhaven River, Jervis Bay, Clyde River, Moruya River, Tuross River, Wagonga Inlet; Victoria: Port Phillip; Tasmania: Tamar River, Derwent River, Huon River, D'Entrecasteaux Channel, Pittwater, Lake Dobson (freshwater), Penna Dam (freshwater)
8. Hydrological investigations in south-western Australia, 1944-50
9. Records of twenty-four hourly hydrological observations at selected stations in eastern Australian estuarine systems, 1942-50. Queensland: Logan River; New South Wales: Richmond River, Clarence River, Macleay River, Hastings River, Manning River, Port Stephens, Hawkesbury River, Georges River, Port Hacking, Clyde River, Tuross River; Tasmania: Tamar River, Derwent River
10. Records of twenty-four hourly hydrological observations at Shell Point, Georges River, New South Wales, 1942-50
11. Analyses of bottom deposits in eastern Australia, 1946-50
12. Estuarine hydrological investigations in eastern and south-western Australia, 1951
13. Analysis of bottom deposits in eastern and south-western Australia, 1951 and records of twenty-four hourly hydrological observations at selected stations in eastern Australian estuarine systems, 1951
14. Onshore hydrological investigations in eastern and south-western Australia, 1951
15. Estuarine hydrological investigations in eastern and south-western Australia, 1952
16. Analysis of bottom deposits in eastern and south-western Australia, 1952 and records of twenty-four hourly hydrological observations at selected stations in eastern Australian estuarine systems, 1952
17. Onshore hydrological investigations in eastern and south-western Australia, 1952
18. Onshore hydrological investigations in eastern and south-western Australia, 1953
19. Onshore planktological investigations in eastern Australia, 1945-54
20. Surface sampling in the Tasman Sea, 1953
21. Estuarine hydrological investigations in eastern and south-western Australia, 1953
22. Further onshore planktological investigations in eastern Australia, 1945-54
23. Planktological investigations made by F.R.V. *Derwent Hunter* in eastern Australian waters, 1952-54
24. Onshore hydrological investigations in eastern and south-western Australia, 1954
25. Surface sampling in the Tasman Sea, 1954
26. Estuarine hydrological investigations in eastern and south-western Australia, 1954

## OCEANOGRAPHICAL STATION LISTS

(Continued)

27. Onshore and oceanic hydrological investigations in eastern and south-western Australia, 1955
28. Surface sampling in the Tasman and Coral Seas, 1955
29. Estuarine hydrological investigations in eastern and south-western Australia, 1955
30. Onshore and oceanic hydrological investigations in eastern and south-western Australia, 1956
31. Surface sampling in the Tasman and Coral Seas and the south-eastern Indian Ocean, 1956
32. Estuarine hydrological investigations in eastern and south-western Australia, 1956
33. Coastal hydrological investigations in eastern and south-western Australia, 1957
34. Coastal hydrological investigations at Port Hacking, New South Wales, 1957
35. Coastal hydrological investigations at Eden, New South Wales, 1957
36. Surface sampling in the Tasman and Coral Seas, 1957
37. Hydrological investigations from F.R.V. *Derwent Hunter*, 1957
38. Coastal hydrological investigations in the New South Wales tuna fishing area, 1958
39. Surface sampling in the Coral and Tasman Seas, 1958
40. Coastal hydrological investigations in south-eastern Australia, 1958
41. Oceanic investigations in eastern Australian waters, F.R.V. *Derwent Hunter*, 1958
42. Coastal investigations at Port Hacking, New South Wales, 1958
43. Oceanic investigations in eastern Australia, H.M.A. Ships *Queenborough*, *Quickmatch*, and *Warrego*, 1958
44. Oceanic observations in Antarctic waters, M.V. *Magga Dan*, 1959
45. Coastal hydrological investigations in eastern Australia, 1959
46. Coastal hydrological investigations in the New South Wales tuna fishing area, 1959
47. Coastal investigations at Port Hacking, New South Wales, 1959
48. Oceanic investigations in eastern Australian waters, F.R.V. *Derwent Hunter*, 1959
