Drift Bottle Releases and Recoveries in Western Australia, 1956-1957

I. INTRODUCTION

A programme of drift bottle releases was begun in Western Australia in 1956 to investigate the currents in the Shelf waters between Shark Bay and Albany.

A general description of the use of drift bottles in fishery research is given by Vaux and Olsen (1961).

II. METHODS

The Drift Bottles.—The bottles were ballasted to float with a minimum of their surface exposed to wind influence. A bottle which would float in fresh water with its top just awash would float in seawater with about two inches of its neck above water.

Each drift bottle contained a postcard bearing a number by which the investigator could recognize the date and place of release. The finder was asked to return the postcard with information on the time and place of finding.

Release Positions.—Bottles were released from commercial vessels as opportunity permitted, so that release positions were scattered throughout the whole Shelf area between Shark Bay and Albany. At two positions regular release of bottles was possible; these have been listed in order of release date as Parts 2 and 3 of the data listings.

Preparation of Data.—Postcards from recovered drift bottles were returned to CSIRO, rewards were paid, latitudes and longitudes were allocated to recovery positions, and the information transferred to 80-column punched cards which were run through various computer programmes for checking.

Computations on Data.—The number of days between release and recovery of drift bottles, the distance and direction travelled, and the average speed were calculated by computer. Distance travelled and direction are along straight lines joining release and recovery positions, and were computed by the method known as 'short-distance sailing' (British Admiralty 1960).

The drift bottles were made and released under the general direction of A. Middleton, latitudes and longitudes were estimated by L. Thomas, and D. Vaux was responsible for the computer programmes and the listing of data.

III. DATA

Data were processed in C.D.C. 3200 and 3600 Computers and are listed in order of drift bottle number, and, for two positions, in order of date of release.

EXPLANATION OF HEADINGS

Parts 1, 2, and 3

RELEASE RECOVERY LATITUDE LONGITUDE	Release and recovery positions given in degrees and minutes
RELEASE RECOVERY DATE	Given as day/month/year
DAYS OUT	Calculated from noon on day of release to noon on day of recovery
DISTANCE TRAVELLED	Given in nautical miles (6080 feet)
AVERAGE SPEED	Given as nautical miles per day, to the nearest tenth of a nautical mile
DIRECTION	Given in degrees, from release position to recovery position
