

CCAM-T

(Option for Atmospheric Forecasting Applications)

Price List

Companies and individuals may use the CCAM-T under licence to CSIRO. CCAM-T is provided as executable code, which will run under the Windows operating system to generate synoptic scale weather forecasts for use by TAPM. A licence for TAPM is a pre-requisite to obtaining CCAM-T.

- CCAM-T software: AUD\$6,000
- CCAM-T additional licence: AUD\$3,000
- CCAM-R relocatable version: AUD\$12,000
(+GST in Australia)

Upgrades to the relocatable version can be purchased for the price difference between the version(s) already purchased and \$12,000.

CCAM-T first and additional licences are each single-user licences.

The CCAM-R relocatable version allows up to 20 users/regions per licence.

Note that CCAM packages will only be sent once payment on the invoiced amount has been made.

Major upgrades from earlier versions of CCAM-T are available.

- CCAM-T software upgrade: AUD\$2,000
- CCAM-R software upgrade: AUD\$4,000
(+GST in Australia)

Note that additional licences are classified as the 2nd or further licence purchased by an organisation within a single office/location.

By default, CCAM-T synoptic scale weather forecasts are limited to the Australian region. Please contact us for information regarding the use of CCAM-T for regions other than Australia.
