## 1 Summary

Data was collected during in2015\_t02 for the duration of the voyage. Data was collected using VMDAS and post-processed using CODAS.

The OS75 unit was out of commission due to a fault, therefore only the OS150 was operational.

The drop keel was flush with the gondola (transducer 7.7m below the waterline) for the duration of the voyage.

See the voyage computing and electronics report for more details regarding data acquisition.

Overall data quality is good, with some editing required, especially in the top bins.

## 2 Processing Background

The University of Hawaii's CODAS software was used for data post-processing. Revision 269:5bd8c22f6560 dated Oct 19 2016 was used.

## 3 Processing Notes

See summary. No additional rotation of dataset required, some bad bins manually edited.
