1 Summary

Data was collected during IN2019_T04 for the first half of the voyage until reaching approximately latitude 9S as recording of data was not permitted in Indonesian waters. Data was collected using UHDAS and post-processed using CODAS.

Both the RDI Ocean Surveyor 150kHz ADCP and the RDI Ocean Surveyor 75kHz ADCP were run in narrowband.

Internal triggering was used.

The drop keel was flush with the hull for the duration of the voyage.

A new data acquisition PC was commissioned and tested during this voyage. See the voyage computing and electronics report for more details regarding data acquisition.

2 Processing Background

The University of Hawaii's CODAS software 2903:dd2872d4fef0 dated Apr 09 2019 was used for data post-processing.

3 Processing Notes

Issues with the commissioning of the new PC were identified and resolved early in the voyage. Overall data quality was good for the duration of the voyage.

Some profiles were edited out, both manually and using CODAS's automatic processing. The dataset was rotated by 34.5 degrees.

4 Area Covered

Please see the `webpy_bb` and `webpy_nb` folders for plots of collected data.

"shipboard ADCP data. \"CODAS processing\" uses this format
"averaged shipboard ADCP velocities and other variables,
"stages of data processing. The CODAS database stores
"profiles relative to the ship as east and north components
"position, ship speed, heading, and other variables. The
"form contains ocean velocities relative to earth, time,
"transducer temperature, and ship heading; these are designed
"\"ready for immediate use\". The netCDF *long* form is just
"the entire CODAS database. Some variables are no longer
"have names derived from their original CODAS names, dating
"late 1980's.\n",
"\n",
"Post-processing\n",
"-----\n",
"CODAS post-processing, i.e. that which occurs after the
"profiles have been vector-averaged and loaded into the CODAS
"includes editing (using automated algorithms and manual
"rotation and scaling of the measured velocities, and
"time-varying heading correction. Additional algorithms
"recently include translation of the GPS positions to the
"location, and averaging of ship's speed over the times of
"when Percent Good is reduced. Such post-processing is needed
"submission of \"processed ADCP data\" to JASADCP or other
"\n",
