# RV *Investigator*

ADCP Processing Report

Voyage #:	IN2019_T01
Voyage title:	Collaborative Australian Postgraduate Sea Training Alliance (CAPSTAN)
Depart:	Hobart, 0800 Monday, 29 April 2019
Return:	Fremantle, 0800 Thursday, 09 May 2019
Voyage Manager:	Matt Boyd
Chief Scientist:	Associate Professor Leah Moore
Affiliation:	Univesity of Canberra
Report compiled by:	Francis Chui

Contents

1   Summary

Both the RDI Ocean Surveyor 75kHz ADCP and 150kHz ADCP were operational during this voyage. These were run in narrow band mode for the majority of the voyage with the OS75 operated in broadband mode briefly after leaving the Tasmanian continental self and prior to entering 4000m of water.

Internal triggering was used as the focus of this voyage was to collect current data and external triggering was found to be unstable on previous voyages.

Port drop keel was flush with gondola for the entire period of data acquisition for the ADCPs at 2m.

See the voyage computing and instrumentation report for more details regarding data acquisition.

2   Processing Background

The University of Hawaii's CODAS software was used for data post-processing. UHDAS+CODAS python software revision 1108:88eb6931dc63 dated 2017-09-20T23:58:28Z was used.

3   Processing Notes

Narrow band data collection was collected on the OS75 and OS150 sounders and broad band data was collected briefly on the OS75, producing the three NetCDF files: in2019_t01 _os75nb.nc, in2019_t01_os150nb.nc and in2019_t01_os75bb.nc (these files have been zipped into in2019_t01_ADCP_netCDF.zip).

Please see the webpy_os75nb, webpy_os75bb and webpy_os150nb folders for overview plots of collected data.

3.1   Area Covered

"Overview\n",
"--------\n",
"The CODAS database is a specialized storage format designed for\n",
"shipboard ADCP data.  \"CODAS processing\" uses this format to hold\n",
"averaged shipboard ADCP velocities and other variables, during the\n",
"stages of data processing.  The CODAS database stores velocity\n",
"profiles relative to the ship as east and north components along with\n",
"position, ship speed, heading, and other variables. The netCDF *short*\n",
"form contains ocean velocities relative to earth, time, position,\n",
"transducer temperature, and ship heading; these are designed to be\n",
"\"ready for immediate use\".  The netCDF *long* form is just a dump of\n",
"the entire CODAS database.  Some variables are no longer used, and all\n",
"have names derived from their original CODAS names, dating back to the\n",
"late 1980\'s.\n",
"\n",
```

"Post-processing\n",

"--------------\n",

"CODAS post-processing, i.e. that which occurs after the single-ping\n",

"profiles have been vector-averaged and loaded into the CODAS database,\n",

"includes editing (using automated algorithms and manual tools),\n",

"rotation and scaling of the measured velocities, and application of a\n",

"time-varying heading correction. Additional algorithms developed more\n",

"recently include translation of the GPS positions to the transducer\n",

"location, and averaging of ship\'s speed over the times of valid pings\n",

"when Percent Good is reduced. Such post-processing is needed prior to\n",

"submission of \"processed ADCP data\" to JASADCP or other archives.\n",

"\n",

"Full CODAS processing\n",

"---------------------\n",

"Whenever single-ping data have been recorded, full CODAS processing\n",

"provides the best end product.\n",

"\n",

"Full CODAS processing starts with the single-ping velocities in beam\n",

"coordinates. Based on the transducer orientation relative to the\n",

"hull, the beam velocities are transformed to horizontal, vertical, and\n",

"\"error velocity\" components. Using a reliable heading (typically from\n",

"the ship\'s gyro compass), the velocities in ship coordinates are\n",

"rotated into earth coordinates.\n",

"\n",

"Pings are grouped into an \"ensemble\" (usually 2-5 minutes duration)\n",

"and undergo a suite of automated editing algorithms (removal of\n",

"acoustic interference; identification of the bottom; editing based on\n",

"thresholds; and specialized editing that targets CTD wire interference\n",

"and \"weak, biased profiles\". The ensemble of single-ping velocities\n",

"is then averaged using an iterative reference layer averaging scheme.\n",

"Each ensemble is approximated as a single function of depth, with a\n",

"zero-average over a reference layer plus a reference layer velocity\n",

"for each ping. Adding the average of the single-ping reference layer\n",

"velocities to the function of depth yields the ensemble-average\n",

"velocity profile. These averaged profiles, along with ancillary\n",

"measurements, are written to disk, and subsequently loaded into the\n",

"CODAS database. Everything after this stage is \"post-processing\".\n",

"\n",

"note (time):\n",

"------------\n",

"Time is stored in the database using UTC Year, Month, Day, Hour,\n",

"Minute, Seconds. Floating point time \"Decimal Day\" is the floating\n",

"point interval in days since the start of the year, usually the year\n",

"of the first day of the cruise.\n",

"\n",

"\n",

"note (heading):\n",

"---------------\n",

"CODAS processing uses heading from a reliable device, and (if\n",

"available) uses a time-dependent correction by an accurate heading\n",

"device. The reliable heading device is typically a gyro compass (for\n",

"example, the Bridge gyro). Accurate heading devices can be POSMV,\n",

"Seapath, Phins, Hydrins, MAHRS, or various Ashtech devices; this\n",

"varies with the technology of the time. It is always confusing to\n",

"keep track of the sign of the heading correction. Headings are written\n",

"degrees, positive clockwise. setting up some variables:\n",

"\n",

"X = transducer angle (CONFIG1_heading_bias)\n",

"   positive clockwise (beam 3 angle relative to ship)\n",

"G = Reliable heading (gyrocompass)\n",

"A = Accurate heading\n",

"dh = G - A = time-dependent heading correction (ANCIL2_watrk_hd_misalign)\n",

"\n",

"Rotation of the measured velocities into the correct coordinate system\n",

"amounts to (u+i*v)*(exp(i*theta)) where theta is the sum of the\n",

"corrected heading and the transducer angle.\n",

"\n",

"theta = X + (G - dh) = X + G - dh\n",

"\n",

"\n",

"Watertrack and Bottomtrack calibrations give an indication of the\n",

"residual angle offset to apply, for example if mean and median of the\n",

"phase are all 0.5 (then R=0.5). Using the \"rotate\" command,\n",

"the value of R is added to \"ANCIL2_watrk_hd_misalign\".\n",

"\n",

"new_dh = dh + R\n",

"\n",

"Therefore the total angle used in rotation is\n",

"\n",

"new_theta = X + G - dh_new\n",

```
      "               = X + G - (dh + R)\n",
