ADCP Processing Report

Voyage:	in2020_v10
Voyage title:	Storm Bay Modelling
Depart:	Hobart, Tuesday 10 th November 2020
Return:	Hobart, Sunday 22 nd November 2020
Chief Scientist:	Karen Wild-Allen
Affiliation:	CSIRO
Report compiled by:	Steven Van Graas

1 Summary

Data was collected during in2020_v10 for the duration of the voyage. Data was collected using UHDAS and post-processed using CODAS.

Both the RDI Ocean Surveyor 150kHz ADCP and the RDI Ocean Surveyor 75kHz ADCP were run in narrowband.

Internal triggering was used.

Please see the voyage computing and electronics report for more details regarding data acquisition.

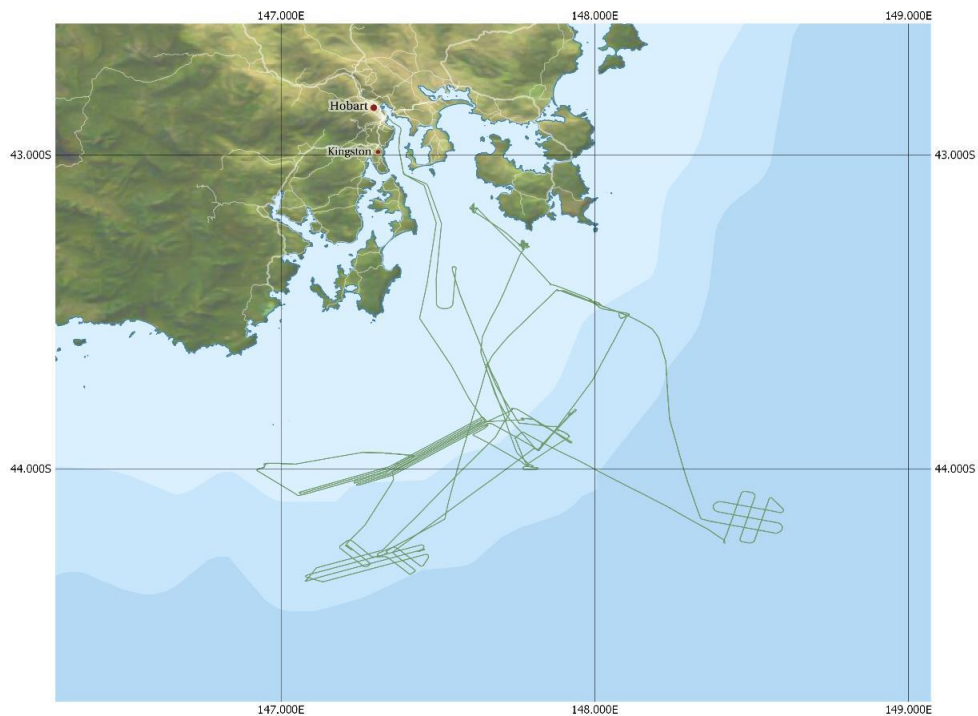

2 Processing Background

The University of Hawaii's CODAS software dated 2020-04-27 was used for data post-processing.

3 Processing Notes

The shipboard ADCPs were turned off during triangulation efforts at the completion of each mooring deployment. There were two occurrences of the Seapath positioning system losing tracking, which resulted in short gaps in the ADCP data for pitch, roll and yaw. Position data was added from the ship's POSMV.

4 Area Covered

Please see the webpy_bb and webpy_nb folders for plots of collected data.
