ADCP Processing Report

Voyage:	in2021_v04
Voyage title:	Biodiversity Assessment of Australia's Indian Ocean Territories
Depart:	Darwin, 0830 ACST Wednesday, 30 th June 2021
Return:	Hobart, 1130 AEST Thursday, 29 th July 2021
Chief Scientist:	Tim O'Hara
Affiliation:	Museum Victoria

1 Summary

Data was collected during in2021_v04 for most of the voyage. The OS75 was turned off whilst in shallower water to prioritise mapping and the OS150 was turned off briefly for mapping around Christmas Island. Data was collected using UHDAS and post-processed using CODAS.

Both the RDI Ocean Surveyor 150kHz ADCP and the RDI Ocean Surveyor 75kHz ADCP were run in narrowband.

Internal triggering was used.

The drop keel was at 2m below the waterline for the duration of the voyage.

See the voyage computing and electronics report for more details regarding data acquisition.

2 Processing Background

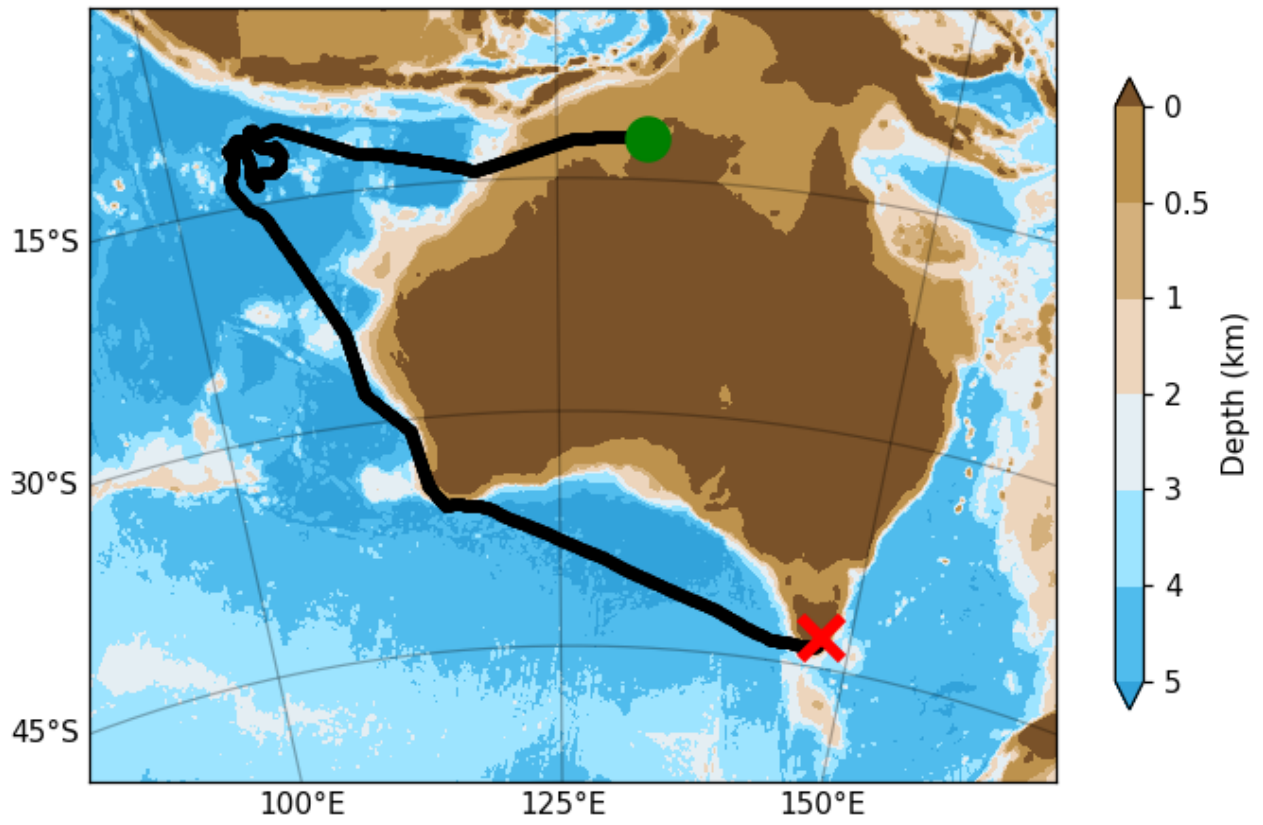

The University of Hawaii's CODAS software changeset: 275:eachbd5569261 dated Tue Sep 22 17:32:12 2020 -1000 was used for data post-processing.

3 Processing Notes

Only minor editing was required. Alongtrack bias and ringing was observed and edited from the data during the transit through the Great Australian Bight.

A heading correction was applied to both ADCPs. The os75 phase was rotated by 0.3010 and scaled by 1.0030. The os150 was rotated by 0.04 and scaled by 1.0073.

4 Area Covered

Please see the webpy_bb and webpy_nb folders for plots of collected data.

5 netCDF Data Headers
