

## voyageplan ss06-2010

# 2010 RV *Southern Surveyor* program

### Continental slope and shelf processes along the south-west region of Western Australia during winter

#### Itinerary

Mobilise Fremantle 0800hrs, Thursday 29 July, 2010

Depart Fremantle 1600hrs, Thursday 29 July, 2010

Arrive Fremantle 0800hrs, Monday 9 August, 2010 and demobilise

#### Principal Investigators

Prof Charitha Pattiaratchi (Chief Scientist)

School of Environmental Systems Engineering and UWA Oceans Institute

Mailstop MO15, The University of Western Australia,

35 Stirling Highway Crawley, WA 6009 AUSTRALIA

**Phone:** (+618) 6488-3179 **Fax:** (+618) 9380-1015 **E-mail:** chari.pattiaratchi@uwa.edu.au

Dr Christine Hanson

School of Environmental Systems Engineering and UWA Oceans Institute

Mailstop M470, The University of Western Australia,

35 Stirling Highway Crawley, WA 6009 AUSTRALIA

**Phone:** (+618) 6488-7252 **Fax:** (+618) 9380-1015 **Email:** christine.hanson@uwa.edu.au

## Scientific Objectives

- Define the structure and in particular the volume flux of the Leeuwin Current (LC), including the geostrophic inflow
- Define the structure and the volume flux of the Leeuwin Undercurrent (LU)
- Examine the dynamics of Dense Shelf Water Cascades (DSWC)
  - spatial extent, transport volume, nutrient fluxes
- Determine the interaction of the LC, coastal currents, DSWC and primary production dynamics during winter
- Obtain water samples to calibrate the bio-optical WET Labs sensors on ocean gliders

## Voyage Objectives

After departing Fremantle, *Southern Surveyor* will conduct 8 cross-shelf transects (Fig. 1) between Jurien Bay and Cape Naturaliste. For each transect, 10 - 15 CTD stations will be occupied depending on the shelf width (with a total of 98 stations over the duration of the voyage). The transects will extend from the coast (20 m isobath) to beyond the 2000 m contour to capture the entire width of the LC. As in previous SS voyages, stations will be located at 50m depth intervals, especially along the continental slope. In addition to the standard CTD and fluorescence, water samples for nutrient analyses and phytoplankton measurements will be collected using the Niskin bottles. Experimental work will likely include <sup>14</sup>C uptake measurements and nutrient uptake measurements.

The high priority areas of operation are off Perth, Rottnest Island and the Two Rocks region. The lower priority areas are at the northern (Transect A) and southern (Transect H) portions of the proposed study track.

## Voyage Track

The area of operation and proposed voyage track are indicated in Figure 1. After departing Fremantle, *Southern Surveyor* will transit to the inshore end of Transect A (off Jurien Bay; Fig. 1) and conduct a cross-shelf transect. This will be followed by transects B to H.

**Figure 1:** Proposed voyage track.

## Time Estimates

	<b>Steaming time (at 11 kn)</b>	<b>'On station' time</b>
Transit to D	11.8	-
Transect D	6.4	11
Transit to E	7.7	-
Transect E	5.7	11
Transit to F	7.4	-
Transect F	5.8	11
Transit to G	6.5	-
Transect G	4.7	11
Transit to Pth Canyon	0.8	-
Transect Pth Canyon	5.1	11
Transit to H	3.1	-
Transect H	6.1	11
Transit to J	7.5	-
Transect J	5.6	11
Transit to K	5.6	-
Transect K	6.5	11
Transit to Perth	12.0	-
 Transit time	 108	
On station	88	
Process studies	0	
 Voyage TOTAL (h)	 196.5	
Contingency	35.6	

## **Southern Surveyor Equipment**

- 1) Navigational: GPS, DGPS (where possible),
- 2) Sounder
- 3) Underway data from thermosalinograph with fluorometer
- 4) Meteorological station (temperature, relative humidity, wind speed, wind direction, barometric pressure, PAR, rainfall, radiation)
- 5) ADCP
- 6) LADCP
- 7) CTD (Seabird SBE 911 plus)
- 8) Rosette (24 bottles up to 10 litres)
- 9) Transmissometer
- 10) Fluorometer (requires support from users for calibration)
- 11) Light (PAR)
- 12) Dissolved oxygen
- 13) Hydrochemistry data for salinity, oxygen, nitrate, nitrite, silicate, phosphate
- 14) Fish laboratory/geosciences laboratory
- 15) Walk-in Freezer
- 16) Blast freezer
- 17) Laboratory Fridges and Freezer
- 18) Milli-Q Water Supply (used in hydrochem analysis)
- 19) Scintillation counter
- 20) General purpose PC's
- 21) 100Mb Ethernet throughout
- 22) UNIX Computers, (Sun Ultra 10)
- 23) Starboard (forward) CTD winch
- 24) SeaSoar
- 25) Hydrographic A-frame (stbd)

## **User Equipment**

1. Optical instrumentation for vertical profiles (Eco puck)
2. Photosynthetron for laboratory use
3. Turner Designs laboratory fluorometer
4. Deck incubators (for nutrient uptake experiments)

## **Special Requests**

EcoPuck to be mounted on rosette (check depth rating).

Unsealed 14C radioisotope will be used for primary production work in the laboratory. Approvals have been obtained from both CSIRO Marine and Atmospheric Research (4/5/2010) and UWA Health and Safety Office (28/5/2010).

## Personnel List

Charitha Pattiarchi	UWA	Chief Scientist, Physical Oceanography
Christine Hanson	UWA	Biological Oceanography
Mun Woo	UWA	Physical Oceanography
Shari Gallop	UWA	Physical Oceanography
Soheila Taebi	UWA	Physical Oceanography
Yasha Hetzel	UWA	Physical Oceanography
Thisara Welhena	UWA	Physical Oceanography
Asha De Vos	UWA	Biological Oceanography
Liza Roger	UWA	Biological Oceanography
Anton Kuret	UWA	Biological Oceanography
Matilda Taylor	UWA	Biological Oceanography
Drew Mills	CSIRO MNF	Voyage Manager/Electronics support
Hiski Kippo	CSIRO MNF	Computing support
Mark Rayner	CSIRO MNF	Hydrochemistry
Dave Terhell	CSIRO MNF	Hydrochemistry

As per AMSA requirements for additional berths on *Southern Surveyor*, the following personnel are designated as System Support Technicians and are required to carry their original AMSA medical and AMSA Certificate of Safety Training on the voyage:

### Name AMSA Certificate of Safety Training No.

Drew Mills	AS02348
Hiski Kippo	AS040836
Mark Rayner	AS02432
Dave Terhell	AS02843

This voyage plan is in accordance with the directions of the Marine National Facility Steering Committee for the Research Vessel *Southern Surveyor*.

**Charitha Pattiarchi**

*Chief Scientist*

## Voyage Plan – SS06/2010

= production stn, which includes extra water samples (but note final locations TBA)

<b>Transect</b>	<b>Station</b>	<b>Lat</b>	<b>Long</b>	<b>Max depth</b>	<b># sampling depths</b>	<b>Nominal sampling depths</b>
